## **Introduction**

Williams Energy RMT proposes to drill the Ute Tribal 7-27-55 well in the Brundage Canyon Field in the southwestern Uinta Basin, Duchesne County, Utah.. It is located on one of series of sloping benches leading down to an escarpment that drops into Sowers Canyon. It shares an access route with another well, the Ute Tribal 1-27-55. This road originates in the SE/SE Section 22 on an existing oil field road. The pad is located in the SW/NE Section 27, T5S R5W, on a sloping northeast facing bench (Figure 1). The land is administered by the Uintah-Ouray Ute Indian Tribe which is headquartered in Fort Duchesne, Utah. Cultural resource inventories were done for the four well and associated access route on October 22, 2002 by Mike Metcalf and Ute Oil and Gas Technician Rudy Myore. A 10 acre block was inventoried for the well pad and 150 foot corridor was inventoried for the 5843 ft. of access road that lay outside the survey blocks for the well locations. Thus, 30.1 acres were surveyed. The inventory resulted the finding of two isolated artifacts. One of these isolated artifacts was on the edge of the well pad's area of potential disturbance. Subsequent to the cultural inventory, the well pad was re-staked in the presence of Ute Technician Lonnie Nephi so that it avoids the artifact. Cultural resource clearance is recommended for the location as it is currently staked.

## **Environment**

The proposed well pad is located in the southwestern part of the Uinta Basin (Stokes 1977), along a dissected ridge between two well incised canyons, Tabby Canyon on the north and Sowers Canyon on the south. These canyons drain in a northeasterly direction into the Duchesne River. The project lies between about 6960 ft and 7090 ft in elevation. Vegetation is a pinyon-juniper woodland which, except on northeast slopes, has very little surface vegetation. In localized areas, mountain mahogany, Mormon Tea, bunch grasses and a few other plants were observed. Bedrock is exposed at the surface. It consists of decomposing sandstone or of clay facies within the Wasatch formation (Hintze 1980). There is no surface soil and no chance that cultural resources are buried. This area is a developing oil and gas field, and there are an existing access road and three other completed wells along the same ridge system where this survey occurred. The access road starts on the ridgetop northeast of the well and follows contours around the heads of several steep drainages while dropping to the pad location. This pad is located at the end of a long, winding access route that it shares with the Ute Tribal 1-27-55 location. It is located on a sloping northeasterly sloping bench that overlooks a steep drainage that runs into Sowers Canyon. The pad is in moderately thick pinyon-juniper with a thin understory including Mormon tea, bunch grass and a few shrubs. Bedrock is exposed in all areas consisting of decomposing clasts of whitish and yellowing sandstone.

## **Files Search**

Numerous small surveys for oil and gas development have occurred within this portion of the Uinta Basin, with the inventories generally showing a low prehistoric and historic site density. Isolated finds are more commonly found than sites. No previous inventories have covered the current well pad and access route, but cultural resource inventories were done for the existing road along the ridge top and for the three existing wells. The low site density is

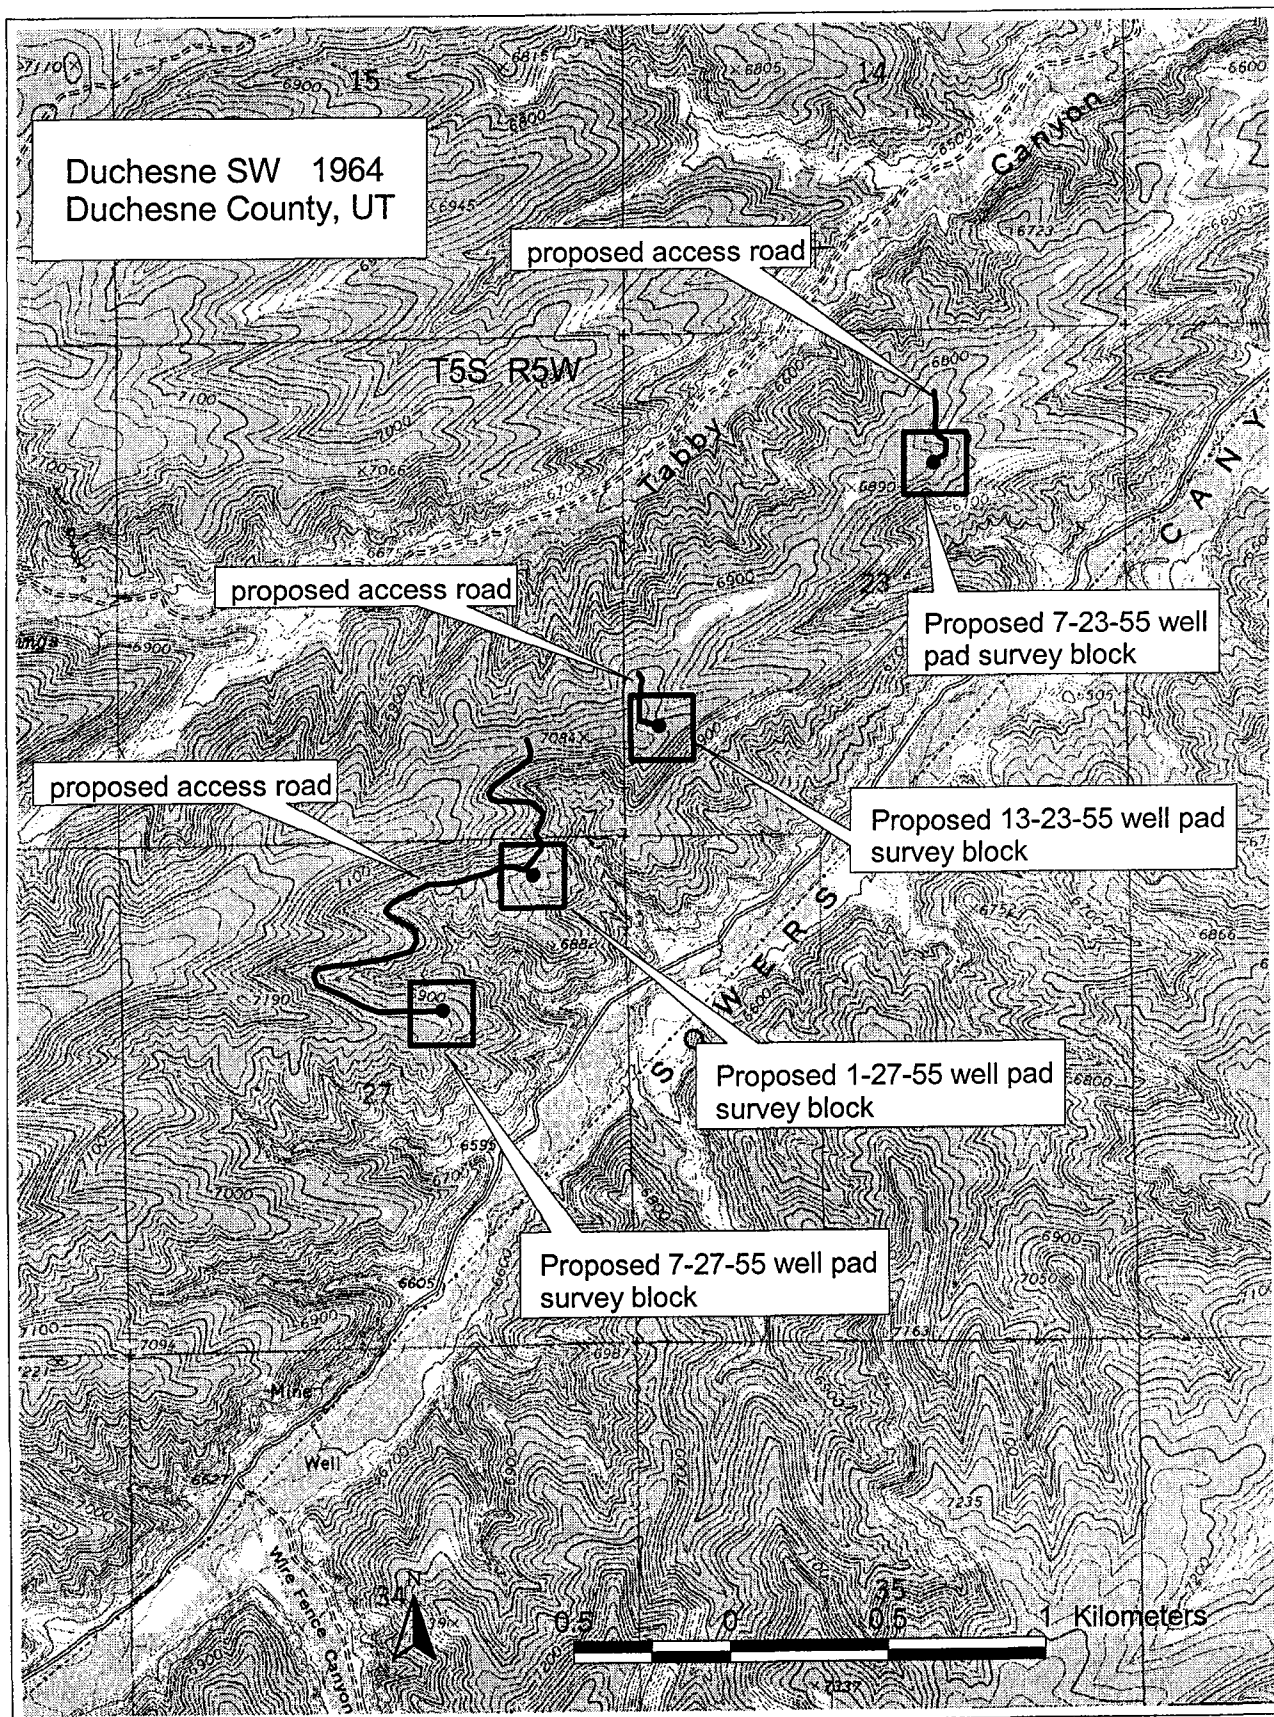

Figure 1 Project location map.

probably related to the overall high and dry nature of the environment and to the lack of surface soils and related plant resources.

## Methods

The access was covered by four pedestrian transects covering a corridor of about 150 ft in width, with both the archaeologist and the Tribal technician walking both directions into and out of each location. The 10 acre blocks for the pad were covered using a series of irregular pedestrian transects walked to ensure coverage of all areas of less than 30° slope. The traditional method of parallel transects walked at regular intervals was not possible here due to the dissected and steep nature of the terrain. Instead, methods had to be adapted to the shape of the terrain. Steeper slopes were inspected visually to ensure that no areas with potential for rock art or rock shelters were present.

**Results** (This section omitted from the client copy)

## Recommendations

Two isolated artifacts were found in the 10 acres for the Ute Tribal 7-27-55. IF-1, the base of a projectile point or knife was found along the edge of the footprint of the proposed well. IF-2 lies quite a bit higher than the pad on a finger ridge, and will not be effected. It is generally the policy of Energy and Minerals to avoid every artifact found during inventories. Avoidance was achieved by moving the well pad to the northwest 20 ft. Lonnie Nephi accompanied Uinta Engineering when they returned to stake the layout of the pad and the center stake was moved at that time. **Cultural resource clearance is recommended for the Ute Tribal 7-27-55 well pad and access road subject to approval from the Uintah and Ouray Cultural Rights and Protection Department.**

### Conditions of Approval

1. General

Compliance with the requirements of Utah Admin. R. 649-1 *et seq.*, the Oil and Gas Conservation General Rules, and the applicable terms and provisions of the approved Application for permit to drill.

2. Notification Requirements

Notify the Division within 24 hours of spudding the well.

- Contact Carol Daniels at (801) 538-5284.

Notify the Division prior to commencing operations to plug and abandon the well.

- Contact Dan Jarvis at (801) 538-5338

3. Reporting Requirements

All required reports, forms and submittals will be promptly filed with the Division, including but not limited to the Entity Action Form (Form 6), Report of Water Encountered During Drilling (Form 7), Weekly Progress Reports for drilling and completion operations, and Sundry Notices and Reports on Wells requesting approval of change of plans or other operational actions.

4. State approval of this well does not supersede the required federal approval, which must be obtained prior to drilling.

5. This proposed well is located in an area for which drilling units (well spacing patterns) have not been established through an order of the Board of Oil, Gas and Mining (the "Board"). In order to avoid the possibility of waste or injury to correlative rights, the operator is requested, once the well has been drilled, completed, and has produced, to analyze geological and engineering data generated therefrom, as well as any similar data from surrounding areas if available. As soon as is practicable after completion of its analysis, and if the analysis suggests an area larger than the quarter-quarter section upon which the well is located is being drained, the operator is requested to seek an appropriate order from the Board establishing drilling and spacing units in conformance with such analysis by filing a Request for Agency Action with the Board.

**SURFACE USE PROGRAM  
CONDITIONS OF APPROVAL (COAs)**

Williams Production RMT Company (Williams) will assure the Ute Tribe that any/all contractors and subcontractors have acquired a current Tribal Business License and have updated "Access Permits" prior to construction. All Williams personnel, contractors and subcontractors will have these permits in their vehicles at all times. Companies that have not complied with this COA will be in violation of the Ute Tribal Business License Ordinance, and will be subject to fines and penalties.

Williams employees, representatives, and/or authorized personnel (subcontractors) shall not carry firearms on their person or in their vehicles while working on the Uintah and Ouray Indian Reservation.

Williams employees and/or authorized personnel (subcontractors) in the field will have approved applicable APDs and/or ROW permits/authorizations on their person(s) during all phases of construction.

Williams will notify the Ute Tribe and Bureau of Indian Affairs (BIA) in writing of any requested modification of APDs or Rights-Of Way (ROW). Williams shall receive written notification of authorization or denial of the requested modification. Without authorization, Williams will be subject to fines and penalties.

The Ute Tribe Energy & Minerals Department shall be notified in writing 48 hours in advance of any construction activity. The Ute Tribal office is open Monday through Thursday. A Tribal Technician is to routinely monitor construction. Williams shall make arrangements with the Ute Energy & Minerals Department for all monitoring that will exceed regular working hours for Tribal Technicians. A qualified Archaeologist accompanied by a Tribal Technician will monitor any trenching construction involved in the pipeline construction. Williams is to inform contractors to maintain construction of the pipelines within the approved right of ways.

A corridor ROW, 30 feet wide and 4017 feet long, shall be granted for the pipeline and for the new access road. The constructed travel width of the new access road shall be limited to 18 feet. Upon authorization by the Ute Tribe Energy & Minerals Department, the ROW may be wider where sharp curves; deep cuts and fills occur; or, where intersections with other roads are required.

Culverts and diversion ditches will be placed and constructed where needed.

Upon completion of the pertinent APD and ROWs construction, Williams will notify the Ute Tribe Energy & Minerals Department for a Tribal Technician to verify the Affidavit of Completion.

Production waters, oil, and other byproducts shall not be placed on access roads or the well pad.

All vehicular traffic, personnel movement, construction and restoration operations will be confined to the areas examined and approved and to the existing roadways and/or evaluated access routes.

Williams will implement "Safety and Emergency Plan" and ensure plan compliance.

Williams shall stop construction activities and notify personnel from the Ute Tribe Energy & Minerals Department and BIA if cultural remains including paleontologic resources (vertebrate fossils) are exposed or identified during construction. The Ute Tribe Department of Cultural Rights and Protection and the BIA will provide mitigation measures prior to allowing construction.

Williams employees and/or authorized personnel (subcontractors) will not be allowed to collect artifacts and paleontologic fossils. No significant cultural resources shall be disturbed.

Williams will control noxious weeds on the well site and ROWs. Williams will be responsible for noxious weed control if weeds spread from the project area onto adjoining land.

Reserve pits will be lined with an impervious synthetic liner. A fence will be constructed around the reserve pit until it is backfilled. Prior to backfilling the reserve pit, all fluids will be pumped from the pit into trucks and hauled to approved disposal sites or shall be used to drill other wells. When the reserve pits are backfilled, the pit liner remnants, the surplus oil and mud, etc., will be buried a minimum of 3.0 feet below the surface of the soil.

A closed system will be used during production. This means that production fluids will be contained in leak-proof tanks. All production fluids will be disposed of at approved disposal sites.

Surface pipelines will be constructed to lay on the soil surface. The pipeline ROW will not be bladed or cleared of vegetation without authorization of the BIA. Surface pipelines shall be welded in place at well sites or on access roads and on other existing roads then pulled into place with suitable equipment. The pipeline portion of the ROW will not be bladed or cleared of vegetation without authorization of the BIA.

Buried pipelines shall be buried a minimum of 3 feet below the soil surface. After construction is completed the disturbed area shall be contoured to blend into the natural landscape and be reseeded between September 15 and November 1 of the year following construction with perennial vegetation seed mixture provided by the BIA or Ute Tribe.

Before the site is abandoned, Williams will be required to restore the well site and ROWs to near their original state. The disturbed areas will be reseeded with desirable perennial vegetation.

Soil erosion will be mitigated by reseeding all areas of disturbance.
